Okay, so the way to get them and I'm careful and calculate when you're going to put on a little bit of weight to go and do wait to go and the courier feel a way to Mara Mara Mara to Mara but packing me on the packing and forwarding fees the recording on the book my show default for donation okay donation flip card in the website donation for poor India India India India India If we want, we can book a ticket for Rs. 5 or Rs. 10.

I have given all that. So, we can add the default box to this. Okay.

We can put it in Tamil and English. Okay. Kavanagar Sith Sabai Annadhanam Thittathirukku Ungalin Nankodai.

Okay. Kavanagar... Can you hear me? Yes, I can hear you. Kavanagar Sith Sabai Annadhanam Thittam.

Annadhanam Thittam Nankodai. That's all. Okay.

Why don't you put it in English? Kavanagar Sith Sabai... Donation for Annadhanam. Like that. Like that.

Okay. One line in Tamil and one line in English. Okay.

Can we show the price? Rs. 10 or Rs. 20? Or is it their wish? No.

Put Rs. 10 as default. Okay.

We have to give a tick box next to it. Okay. One minute.

Yes, yes. Valli is busy. He is in an important online meeting.

He said he will call later. Which number? Valli, Valli, Valli. 98418.

Hello. Yes, tell me. Put Rs.

10 as default. Okay. We have to give a tick box when they check out.

If they don't want it, we will give the tick box. If they don't want it, we will give the tick box. They will like it.

It's not just a box. Okay, sir. Okay.

To proceed, we will show the QR code. This is the QR code you shared. Very good, very good.

Can we give 1, 2, or 2, 3 QR codes? Or is one enough? I think one is enough. Okay. I have been

given 5 QR Codes from the bank The reason I have 5 QR Codes is We are going to a program It is a big program in Sivarathri Almost 1000 people came The stall we are going to We are going to put a stall in 5 places It is a big hall We are going to put a stall in 5 places I thought of giving only one QR Code I thought of giving only one QR Code Sometimes there is a chance of a technical error Network error When the amount goes at the same time I will give 5 different QR Codes If you put 5 stalls, you can put it anywhere If you put 3 stalls, you can put 3 QR Codes Then MID and TID will be given You would have heard about the machine When it goes through that ID This payment and that payment will not affect There will be no technical error There will be no network issue They said something like that That is for multiple places I think one is enough for the website If you say, it is ok If you say, it is ok If you click this button, the UPI ID app will open Either they can do it in the QR Code Either they can do it in the QR Code Is this UPI ID in it? Is this UPI ID in it? This is UPI ID I did not share UPI ID Actually, I sent you a QR Code Actually, I sent you a QR Code There is a QR Code But it did not mention UPI ID Just a minute Let me see in the QR Code I have They did not give me anything in the bank Like UPI ID Will they give UPI ID for the current account? I don't know if they do I don't know I don't know So I will talk to the bank So this is a dummy Yes Bank account details Bank account details Very good So I will talk to the bank and see if they give me something You can share this Because this is also a dummy Oh is it? Yes Okay I have the account details I will share it with you I will share it with you Good morning sir Good morning to you Good day Good day How are you? Good morning Good morning One minute Okay You can send it after you note it It is there and when you are in a hurry to search for it, you can tell me ok sir next we have to upload a screenshot I will upload an image and I will give a place order ok the order is placed where we can see this is I will show the dashboard this is the dashboard this is where we create the order this is where we create the product this is where we can see the number of orders ok so in this so in this I can print out all the orders for example, I have 5 orders if I give the data and print it out it will be printed out I can cut and paste it easily ok the order that they give that address if it comes in a correct format if I print it out it should come in excel or word like a label if I print it out and give it to the staff it will be easy for them they will cut it and paste it based on the order number ok what I get from this is the pending payment some people will see the order and leave without placing it that should not come in a confirmed order it will not come once they check it it will come only after the payment it will come only after the payment some people will see the payment and leave if the payment is cut we will get the details that they have seen the payment but it will not come in the order list it will not come ok if you click on the view you can see the screenshot ok I have just uploaded a dummy image there will be another image once you verify that the payment has come if you change the under review to paid in the order status will change to received oh after that after the payment I have to pay yes since we asked manually it is like that after that you can check if the processing is completed or not ok if you send it to the staff the processing will be completed because we keep the website on full day once the payment comes once the payment comes it will come to my number yes once the payment comes we have to change it to paid in yes you can check the order details ok you can see the order summary 150 rupees 3 quantities billing

address, delivery address you can see the details ok ok if you want a consolidated print out you can check it individually there are 10 orders 10 paid I need the address of the 10 paid I need the address of the 10 paid you have to check it you have to put the date how many paid orders are there 10 orders if I get the print out of those 10 it will be easier for them to work how do I check it I will add it it will be easier if you check it date wise I will put the date today is 17th today is 17th 17th I will open the website in the morning it will be in full sales I will take the orders at 4pm to pack I will put the date at 4pm and see how many orders are there once I give it I need the print out and the order number I need the customer's name address and mobile number staff will take the print out and see the order number and add it ok ok I need this I need the order list For example, let's say an order number is 100.

I need two types of printouts. First, I need an order list. If an order number is 100, I need a list of the items that have been ordered.

A printout. What I do is, I take an order-wise printout from my staff, and a date-wise list. When I take an order-wise list, I put an order number on top of it, like Oodhupathy 4, Sandhanam 5, Karpooram 10, and on top of that order number, I get a total printout of the items that have been ordered.

I need a printout for each order. In another printout, I put an order number, and the address of the person who ordered it. When I give these two printouts to my staff, they take the product from the goodown with the order number, and pack it.

Then, with the same order number and the person's address, they pack the parcel, cut the address, and stick it on top of it. Do you understand what I'm saying? Yes, I understand. This is the matter.

I need to take these two lists. I need to take two daily prints. I need to get one according to the order list.

If I get 10 orders today, I need to get an order number of 100 items, an order number of 101 items, an order number of 103 items, an order number of 104 items, an order number of 105 items, and a printout of the product list. In another printout, I need to put an order number, and the name, address, and phone number of the person who ordered it. I need to give them both.

Once I give them both, they take the product with the order number, pack the courier, and with the address list, with the same order number, they stick the address, and paste the courier. That's it. Okay.

I hope I didn't confuse you. No, no. I understand.

The order list... In the order list... No, no. Two printouts. I'll give them two printouts daily.

Okay. That's when they take the order and complete it. Okay.

Very good. See what I mean. Okay, okay.

Do I need to give you anything else? I'll give you the bank account details. I'll talk to UPIID and try to get it for you. Thirdly, I'll talk to Kannan sir, and try to get the credentials from Blue Hose soon.

Okay. I need to talk to them about hosting. You need to talk to Kannan, right? Yes, yes.

He told me to call you. He told me to call you. Did you try calling him? I called Norman, and then someone told me to call you on WhatsApp.

No, no. He's in the UK now. Okay, okay.

In the UK, he's working in a big IT company. Okay. He's in a big post there.

That's why he's a little busy. He can't spend all his time. Okay.

That's why I talk to him only at night. I talk to him at 11 or 12 at night, then he'll be a little free. He'll pick up the call immediately.

Just send him a message, even in a group. We're free now. You can call me anytime.

If you say yes, he'll call you even at night. Okay. I'll try to talk to him today.

Okay, okay. Okay. You told me to get an order on WhatsApp.

Yes. We've achieved it. You'll get contact details and order summary in WhatsApp.

Excellent. Excellent. Super.

It's coming individually. Yes. Very good.

But when I print it, it should come as a whole, right? Because for me, I'm an owner. I can view and see the order, what are the orders I received today. My staff can't do it individually.

For them, it's consolidated. They'll press a button. If I say print, I'll get a list of all the orders.

Okay. If I say print again, I'll get an order number with address. They'll print it, sit down, take the order, and plan it.

Okay. Okay, okay. I've done it with my personal number.

Okay. But for your number, I need the Facebook ID, and its credentials. No, the number is... The number is... Didn't I give you a number? 9444055166.

You said WhatsApp shouldn't be there. I've kept it as it is. I've kept the SIM only.

We need to configure that number. What should we do with that? We need to go to the metadashboard and configure the number. Only then... If you say, we can do that.

Because there's a phone. I've just put the SIM. In that, I didn't download WhatsApp.

WhatsApp shouldn't be there in that number, right? Yes. Okay. I've kept it as it is.

Who will get the Facebook credentials and OTP? Do you need Facebook's OTP? Facebook ID, OTP, everything is there. I've already sent the ID. Facebook, Instagram, everything is there.

You need to log in and see. Do you need that? Yes. What else do you need for Facebook? There's a website called metadashboard.

We can integrate WhatsApp in that. Okay. Now, for you, Facebook, then Instagram, then... It shouldn't be Instagram.

It should be Facebook's ID. Facebook ID. Facebook's ID.

I've already sent the ID link to them. Do you need the password now? Yes, password. When you log in, there will be some difficulties.

Because I can't log in immediately. Okay. There will be an error from another device.

Okay. With that... I'll give you his number to see who is maintaining it. I'll share it.

I'll connect and see. Shall I connect now? No, sir. You tell him.

I'll tell him, get his number, and put it in the group. You can talk to him anytime. I'll give him the information.

Okay. Okay? Anything else? That's all, sir. I just need the product images.

If you send me the demo link, give me the option to edit and add it. Okay. What I'll do is, I'll take a photo with him, I'll add it as far as I know, and save it.

You can see and upload it later. Okay. Give me the link.

I'll watch the demo on the desktop. Okay. Okay? I need to do four things for you.

First, I need to help you get the credentials from Kannan sir. Second, I need to see the UPI ID from the bank. Third, I need to send the account details from Kavanagar Associates.

Fourth, I need to link the Facebook login ID to you, and get you the password. I'll do this for now. You can send me the link now.

I'll watch it on the desktop. If you give me the edit option, I'll take a photo and upload it. I'll send it

to you.

You can watch it. Okay. Okay? Okay.

Are you on the call sir line? Yes, sir. I'm editing. I'm listening to everything.

Okay, sir. Very well, sir. Everything is going well.

Kannan sir is lagging behind. Is everything impressive, sir? Yes, sir. If I show it to him on the desktop, and he says okay, I'll be very happy.

Because he doesn't know how to use a mobile. That's why I asked him for the link. If he sends the link, immediately I'll make him sit with me, and I'll display it and show it to him.

Okay, sir. I'll share the link with you to upload the photos and product details. Tell him to send it.

Yes, sir. You can deploy somebody. Before adding that person, talk to Sam once.

No, no. I didn't add that person in the group. No, no.

I didn't add that person in the group. No, no. Not in the group.

Tell Sam to talk first. Yes, sir. After that, let him proceed according to his guidance.

Okay, okay. Super, sir. Super, sir.

Okay. Sam, I forgot to tell you this. I forgot to tell you what to do to add the video.

Please remember that. I'll see to that. Because there will be a three-hour video, two-hour videos.

What to do for that? In the e-product. Yes, in the e-product. Okay.

We're going to upload the regular yoga classes online. Okay. If you want to watch that, you have to pay \$10 and watch it.

Okay. Do that option as well. In the next meeting, we'll see in the next progress video.

Okay, sir. Thank you, Neelakrishnan. Thank you, Sam.

Thank you, KM sir. Thank you so much. Thank you, sir.

Thank you, sir. Thank you, my team. Thank you.

Okay, okay. Thanks, guys.
